PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience building backend systems from scratch in Go and Python, with production solutions in the healthcare and energy sectors.

PROFESSIONAL EXPERIENCE

Mid-Level Software Engineer

June 2025 – July 2026

INDRA

Hybrid

- Resolved tickets across a highly varied technology stack (**Go**, **Python**/Django, **JavaScript**/React, **AWS**), contributing to **architecture**, **code review** and **requirements gathering**.
- Implemented the **Data Quality** solution alongside the data architect: validation rules, sanity routines and **event saga listeners** (**Java**/Quarkus, **Python**). Data quality from **75% to 98%** at the **Coordinador Eléctrico Nacional** (Chile's national grid operator), externally validated.

Software Engineer

January 2024 – June 2025

National Cancer Institute (Chile)

On-site

- Proposed, designed and built from scratch the **Integrador**, an orchestrator written in **Go** that synchronizes **4 Oracle databases** belonging to isolated clinical systems, processing requests from an **external vendor's API** as they arrive. **Still in production**.
- Implemented the **event saga** pattern with **compensation** on partial failures, **retries with queueing** and persistence of each saga's state in the database for **review and auditing**. **Unit and integration tests** with **testify**.
- Enabled **FHIR** interoperability with the **North Metropolitan Health Service** via **Mirth Connect**, eliminating manual data updates in production.
- **CI/CD** with **Git Hooks** and migration to **Docker** (deployment from **1 hour to 5 minutes**); **Linux/Apache** server administration and maintenance of legacy **PHP 5.7/CodeIgniter 3**, migrated to **PHP 8/Laravel**.

Junior Software Developer

July 2022 – December 2023

Coolebra

Remote

- Built from scratch an **ETL** in **Python**, with **no external dependencies**, indexing **200,000 products daily** from **PostgreSQL** into **OpenSearch** with price history, in **2 hours** across **5 machines** (**Terraform**).
- Scaled **scraping of 30+ retailers** (BeautifulSoup, Selenium) using **reverse engineering** across **3 EC2 instances**; data visualization in **React** and **Mercado Pago** integration for subscriptions.

Teaching Assistant, Object-Oriented Programming III and Databases

November 2021

INACAP

Remote

- Taught inheritance and object-oriented modeling in **Python** and **relational databases**.

CURRENT PROJECT

Petfi.io | Social platform for animal rescue and adoption | Collaborative project

March 2026 – Present

- Rescue and adoption platform with over **11,000 active users**. Proposed and implemented features in **Flutter** using **Spec Driven Development**.

EDUCATION AND CERTIFICATIONS

INACAP | B.Eng. in Computer Engineering

2019 – 2022

University of Helsinki | Full Stack Open Certification

2024

Oracle | Oracle Cloud Infrastructure Certified Foundations Associate

2026

TECHNOLOGIES

Languages: Go, Python, JavaScript

Databases: Oracle/PL-SQL, PostgreSQL, MongoDB, OpenSearch

DevOps: AWS (EC2), Docker, Terraform, CI/CD, Git Hooks, Linux
