

Felipe Farias Escobar

Mid-Level Software Engineer

Santiago, Chile

felipe.farias.e1@gmail.com | LinkedIn.com/in/FelipeFa6 | Github.com/FelipeFa6

PROFESSIONAL SUMMARY

Software Engineer with 4 years of full stack experience, working in production with **TypeScript** across **React** and **NestJS**, as well as **Go** and **Python**, in the healthcare, energy and retail sectors.

PROFESSIONAL EXPERIENCE

Mid-Level Software Engineer

June 2025 – July 2026

INDRA

Hybrid

- Front-end development in **React** with **TypeScript** for platforms of the **Coordinador Eléctrico Nacional** (Chile's national grid operator): new views and components, API integration, refactoring and migration of existing code, and UI bug fixing.
- Development on **NestJS** microservices with TypeScript: new endpoints and features, bug fixing and deployment execution. Maintenance of **Go** microservices, development with **Django** on **AWS** and deployments on **GCP** (Compute Engine).
- Implemented the Data Quality solution alongside the data architect: validation rules and **event saga** listeners (Java/Quarkus, Python). Data quality from **75% to 98%**, externally validated. Contributed to architecture, **code review** and query optimization.

Software Engineer

January 2024 – June 2025

National Cancer Institute (Chile)

On-site

- Proposed, designed and built from scratch the **Integrador**, a concurrent orchestrator in **Go** that synchronizes **4 Oracle databases** of isolated clinical systems through its own HTTP endpoints, using the **event saga** pattern with compensation on partial failures and persistent retries. **Still in production**.
- **FHIR** interoperability via **Mirth Connect**. **CI/CD** with Git Hooks and migration to **Docker** (deployment from **1 hour to 5 minutes**); legacy **PHP 5.7/CodeIgniter 3** migrated to **PHP 8/Laravel**.

Junior Software Developer

July 2022 – December 2023

Coolebra

Remote

- Full rebuild of the landing page in **React**: a discounted-products section with price variation resolving searches against **OpenSearch**, a card-discounts panel, and a price-history visualization (**Chart.js**) that let users verify whether an advertised discount had been inflated. **Mercado Pago** integration for subscriptions.
- Built from scratch an **ETL** in **Python** with no external dependencies, auditing **200,000 products daily** from **PostgreSQL** into OpenSearch, in **2 hours** across **5 machines (Terraform)**, and scaled scraping of **30+ retailers** across **3 EC2 instances**.

Teaching Assistant, Object-Oriented Programming III and Databases

November 2021

INACAP

On-site

- Taught inheritance and object-oriented modeling in **Python** and relational databases.

CURRENT PROJECT

Petfi.io | Social platform for animal rescue and adoption

March 2026 – Present

- Platform with over **11,000 active users**. Web application in **Flutter Web**, including the admin panel and its **role system**, on **Firebase** (Firestore, Authentication, Storage, Messaging, Hosting) with security rules and composite indexes. Scripts in **Node.js** and AI-assisted **Spec Driven Development**.

EDUCATION AND CERTIFICATIONS

INACAP | B.Eng. in Computer Engineering | Degree 2023

2019 – 2022

University of Helsinki | Full Stack Open, core course (React, Redux, Node.js, Express, MongoDB)

2024

Oracle | OCI 2025 Certified Foundations Associate

2026

TECHNOLOGIES

Languages: TypeScript, JavaScript, Go, Python, SQL, PHP, Dart

Front-end: React, Chart.js, Flutter Web

Back-end: NestJS, Go/Gin, Django, FastAPI, Laravel

Data and Infrastructure: PostgreSQL, Oracle/PL-SQL, OpenSearch, Firestore, MongoDB, AWS (EC2), GCP (Firestore, Compute Engine), Docker, Terraform, CI/CD, Linux

Practices: Microservices, Event Saga, ETL, systems integration, testing, code review, Scrum, Kanban
